

Decconek is a simple and fast solution for connecting decks to brick veneered homes.

No More Post & Beam Systems!

No More Extended Footings to Firm Bearing Ground!

Decconek is a non-visible alternative to deck connections that will save you time and money!

Save Time & Money!

Decconek was engineered to provide a simple and fast alternative to the Post and Beam system. It reduces labor costs and eliminates the need for extending footings to firm bearing ground (sometimes 8-9 feet below grade)!

Increase Aesthetics & Reliability!

In addition, the galvanized Decconek product is visually hidden and improves security by exceeding the required code loads by an average of 200%.

How it works:

Step 1: Install Interior Channel

Step 2: Install Decconek thru Rimjoist to Interior Channel

Step 3: Install Brick Veneer

Step 4: Connect a deck!

About us:

Decconek, LLC. was created in early 2013 when the *International Residential Code of One and Two Family Dwellings* changed the requirements for attaching deck ledger boards to brick veneered homes. Dave Beyerle and Terry Tincher engineered Decconek as a simple and fast alternative to the Post and Beam system, as well as, the extended footing to firm bearing ground. Decconek proved its engineering excellence at the University of Cincinnati's Large Scale Testing Facility by exceeding the gravity loads by an average of 2.9 times that of the design load. Since the start of production in 2016, more than 25 homes have been equipped with the only non-visible alternative to deck connections.

Decconek partners:
Dave Beyerle & Terry Tincher

Decconek is manufactured at Tincher's Welding, LLC in Harveysburg, Ohio in their state of the art manufacturing facility.

Benefits:

- No Post & Beam Support System
- No footings to firm bearing ground
- 2.9 times stronger than required
- Cost Effective
- Labor Efficient
- Visibly Aesthetic
- Guaranteed Tested by the University of Cincinnati's Large Scale Testing Facility
